Abstract

This is a sample document that tests the use of entries in sectioning commands through commands like `\glsfmtshort` and `\glsfmttext`.

Contents

Chapter 1

Sample Chapter with HTML Abbreviation

First use: hypertext markup language (HTML). Next use: HTML. Note that the sample entry that occurs at the start of the chapter title appears in lower case in the PDF bookmarks, since the case-changing command can't be used there.

Page break to test header.

Chapter 2

Another Sample Chapter with HTML Abbreviation

The case-changing commands can't be used in PDF bookmarks, so this chapter has used \texorpdfstring to provide an alternative for the PDF bookmark. The first chapter (Sample Chapter with HTML Abbreviation) didn't do this so "Sample" appeared in lower case in the PDF bookmark.

Page break to test header.
