

# The `easy-todo` package

Juan Rada-Vilela

November, 2014

## Abstract

The `easy-todo` package allows to create TODO notes in a document and show the list of TODOs as an index with references.

## 1 Options

When including the package, the following options are available:

**enabled** Shows the TODO notes as well as the index.

**enable** Same as before.

**disabled** Hides the TODO notes as well as the index. Useful for printing drafts without the TODO notes, but keeping them in the document.

**disable** Same as before.

**final** Same as disabled.

**chapter** Prints the list of TODOs as a chapter.

**section** Prints the list of TODOs as a section.

For example:

```
\usepackage[enabled,section]{easy-todo}
```

## 2 Commands

**\todo{note}** Creates a note with text “**note**”.

**\todoi{note-i}** Creates an empty note with information “**note-i**” appearing only at the index.

**\todoii{note-ii}{information}** Creates a note with “**note-ii**” in place and “**information**” at the index.

**\listoftodos** Creates the list of TODOs.

### 3 Changelog

- Added options **enable** and **disable**
- Added commands **todoi**, **todoii**

This is a todo **1.note** that appears in full everywhere. This is a todoi **2.** that appears as a number and the note at the index. This is a todoii **3.hint** note that shows a hint at the place and the information at the index.

### ToDo

	P.
1. note . . . . .	2
2. note i . . . . .	2
3. information . . . . .	2
